### Research Interests

Japan's manufacturing industry, which has led the world in product quality, is in a crisis situation. This is a problem typified by falsification, defects and concealment of inspection data that has been on since the 2000s. Companies must declare CSR (Corporate Social Responsibility) internally and externally and have the responsibility to make appropriate decisions in response to requests from citizens and stakeholders involved in the global environment, which I have achieved in the company as a department manager as well. I will do the work related to the Next Tataru Co-Creation Centre and this will be a place of useful research and education on advanced materials. When considering human resource development with creative and practical skills and global human resource development, it is the future society workers who are properly aware of CSR and business people who need to be at the core of research as an important factor must be. As an important research theme, we need to work with other researchers and students.
